

# ESTABLISH AND ENFORCE SECURITY FROM CODE TO CLOUD WITH A QUICK START SERVICE

*A Quick Start from Tenable® Professional Services transforms your product into a security solution enabling you to see, predict and act on cyber risk to your business.*

With the growth of hybrid and multi-cloud environments, the need to govern and secure Infrastructure as Code (IaC) is paramount. You need a solution that removes manual processes to continuously scan infrastructure code, monitors production cloud deployments for changes and misconfigurations, and automates resolution of policy violations. You want to save effort and adhere to defined policies with every commit, ensuring security from build time to run time.

Organizations need to remediate risks quickly, and reduce the burden of security without requiring everybody to be a security expert. To address this, Tenable has introduced Tenable.cs, a developer-friendly, cloud native security platform that enables you to establish and enforce security and compliance policy from code to cloud. Tenable.cs addresses cloud security risks across the entire lifecycle and supply chain, in development and runtime, by focusing on fixes in code.

A Quick Start service ensures you are implementing your Tenable.cs solution effectively to immediately improve your security posture and set you up for future success. We will work with you to accelerate configuration and integration to reach the full operational capability, so that your solution runs efficiently and provides visibility of code flaws and other sources of cyber risk across your environment.

## SERVICE OUTCOMES

- **Accelerate product installation and configuration**  
Tenable's experienced consultants will ensure your solution is properly installed and configured based on your business objectives, so you are up and running quickly.
- **Implement industry-leading practices**  
We will implement and guide you on Tenable's best practices for enterprise deployment to ensure you are using the full capabilities of your Tenable products and proactively discovering assets.
- **Fully validate operational capabilities**  
The Tenable solution will be tested end-to-end for scanning and other operational capabilities, so you can be confident that you are using your scanning resources efficiently.

*Developer-focused cloud security features of Tenable.cs integrate into your Integrated Developer Environment (IDE) to perform continuous security checks on your IaC.*

# KEY BENEFITS

## Thorough Planning and Preparation

Our remote or onsite Quick Start engagement options are multi-phased service offerings that are designed to enhance your Tenable deployment. We will work with you to determine the scope of your implementation, based on your current practices and goals for your DevOps and DevSecOps journey.

First, we will work with your key stakeholders prior to the engagement to align with your business objectives to plan a successful implementation.

Then, we will develop a list of prerequisites, identify contacts and create a schedule to ensure the engagement runs smoothly.

## Professional Configuration of Tenable.cs

Once we have set up access, we will assist in creating user accounts, downloading and using the Command Line Interface (CLI), and connecting to and scanning Source Control Management (SCM) repositories and cloud provider assets.

## Quick CI/CD Integration and Scan Optimization

Tenable.cs integrates into your CI/CD pipelines to provide visibility of flaws in code so they can be remediated before being deployed into runtime. After reviewing the high-level scan results with your team, we will cover how to interpret scan data and generate reports in greater depth. Our consultants will share their industry knowledge and orient you to Tenable's best practices for effective future scanning.

## Comprehensive Solution Documentation

Tenable will provide links to relevant and useful documentation to help maintain your deployment.

## Supporting Your Growth

Organizations change and develop over time. Tenable Professional Services can help ensure your solution stays aligned to your evolving business requirements.

## Experienced Professional Services Team

Tenable Professional Services' goal is to implement our products to solve your most pressing security problems, enabling your organization to see, predict and act on cyber risks. To accomplish this, we capitalize on our combined years of industry experience to tackle even the most challenging requirements.

By engaging Tenable Professional Services, you can realize the value of your Tenable investment more quickly to feel confident you are on the right path for Risk-based Vulnerability Management (RBVM) program maturity. We have a broad portfolio of services and training available worldwide, remotely or on-site, to meet your specific needs.

## About Tenable

Tenable<sup>®</sup>, Inc. is the Cyber Exposure company. Over 30,000 organizations around the globe rely on Tenable to understand and reduce cyber risk. As the creator of Nessus<sup>®</sup>, Tenable extended its expertise in vulnerabilities to deliver the world's first platform to see and secure any digital asset on any computing platform. Tenable customers include more than 50 percent of the Fortune 500, more than 30 percent of the Global 2000 and large government agencies. Learn more at [www.tenable.com](http://www.tenable.com).
