

# GAIN VISIBILITY AND START SCANNING MODERN WEB APPLICATIONS WITH A QUICK START SERVICE

*A Quick Start from Tenable® Professional Services transforms your product into a security solution enabling you to see, predict and act on cyber risk to your business.*

Today's complex IT environments are filled with both traditional and modern, dynamic assets. Organizations are now embracing virtual and cloud assets, and as this digital transformation continues, there has also been a sharp rise in the number and importance of web apps used to conduct business of all kinds. Modern web apps are easily accessible to external users by design, and change almost constantly, making them notoriously vulnerable. In fact, web apps are the most common attack vector causing data breaches today.

Organizations need a comprehensive strategy to quickly and accurately identify all of the web applications in use across their environment. To address this, Tenable's world-class Research team has built Tenable.io Web App Scanning (WAS) to deliver comprehensive accurate and automated vulnerability coverage of your modern web apps. WAS integrates web app assessments into the Tenable.io Asset View alongside your traditional IT and cloud assets, for unified visibility across your attack surface.

A Quick Start service ensures you are implementing your Tenable.io WAS solution effectively to immediately improve your security posture and set you up for future success. We will work with you to accelerate configuration and integration to reach the full operational capability, so that your solution runs efficiently and provides visibility of web apps and other sources of cyber risk across your environment.

*Create new scans in seconds and get actionable results in minutes with Tenable.io Web App Scanning*

## SERVICE OUTCOMES

- **Accelerate product installation and configuration**  
Tenable's experienced consultants will ensure your solution is properly installed and configured based on your business objectives, so you are up and running quickly.
- **Implement industry-leading practices**  
We will implement and guide you on Tenable's best practices for enterprise deployment to ensure you are using the full capabilities of your Tenable products and proactively discovering assets.
- **Fully validate operational capabilities**  
The Tenable solution will be tested end-to-end for scanning and other operational capabilities, so you can be confident that you are using your scanning resources efficiently.

# KEY BENEFITS

## Thorough Planning and Preparation

Our remote or onsite Quick Start engagement options are multi-phased service offerings that are designed to enhance your Tenable deployment. We will work with you to determine the scope of your implementation, based on your network specifics and goals for your Risk-based VM journey.

First, we will work with your key stakeholders prior to the engagement to align with your business objectives to plan a successful implementation.

Then, we will develop a list of prerequisites, identify contacts and create a schedule to ensure the engagement runs smoothly.

## Professional Configuration of Tenable.io WAS

Once we have set up access and created user accounts, we will deploy the appropriate sensors and identify which web applications you wish to focus on. Our consultants will also demonstrate effective methods to discover other web servers and applications that may be in use across your environment.

## Quick Initial Scanning, plus Tuning and Optimization

Tenable.io WAS will scan to identify web applications (URLs) and provide visibility of their vulnerabilities. We will review the high-level results of these quick scans with your team, then fine-tune scans of some selected web apps for greater depth.

Our consultants will share their industry knowledge and orient you to Tenable's best practices for effective future scanning.

## Comprehensive Solution Documentation

Tenable will provide links to relevant and useful documentation to help maintain your deployment.

## Supporting Your Growth

Organizations change and develop over time. Tenable Professional Services can help ensure your solution stays aligned to your evolving business requirements.

## Experienced Professional Services Team

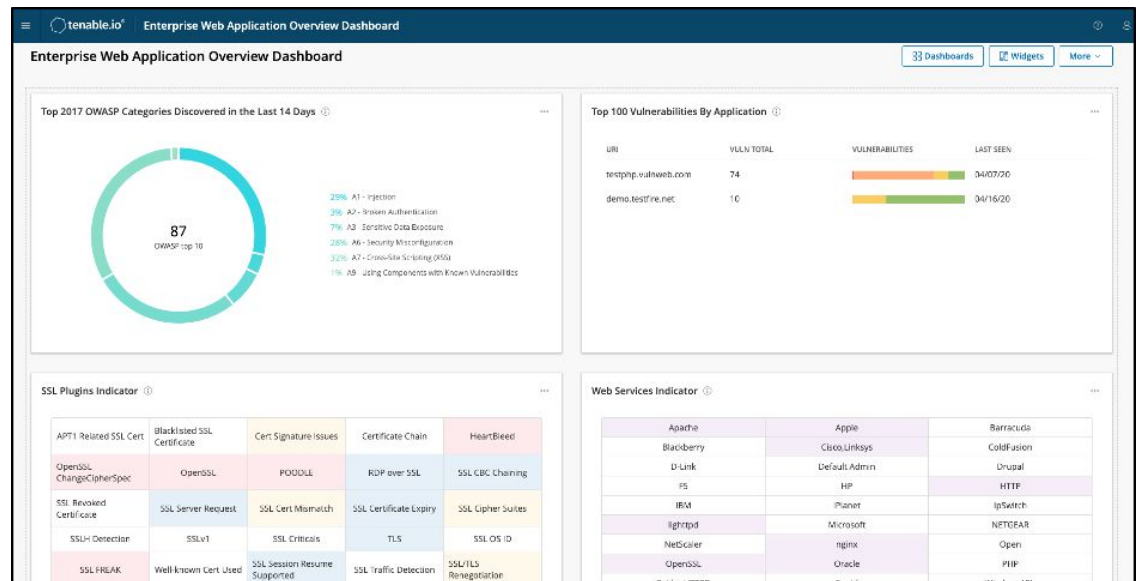

Tenable Professional Services' goal is to implement our products to solve your most pressing security problems, enabling your organization to see, predict and act on cyber risks. To accomplish this, we capitalize on our combined years of industry experience to tackle even the most challenging requirements.

By engaging Tenable Professional Services, you can realize the value of your Tenable investment more quickly to feel confident you are on the right path for Risk-based Vulnerability Management (RBVM) program maturity. We have a broad portfolio of services and training available worldwide, remotely or on-site, to meet your specific needs.

## About Tenable

Tenable®, Inc. is the Cyber Exposure company. Over 30,000 organizations around the globe rely on Tenable to understand and reduce cyber risk. As the creator of Nessus®, Tenable extended its expertise in vulnerabilities to deliver the world's first platform to see and secure any digital asset on any computing platform. Tenable customers include more than 50 percent of the Fortune 500, more than 30 percent of the Global 2000 and large government agencies. Learn more at [www.tenable.com](http://www.tenable.com).
